

**Project name:** *Operational & Financial Performance Dashboard*

**Tool:** Power BI

**Data:** Synthetic dataset (Transactions 2023–2024)

**Author:** Jazz Johnston

**Company:** The company provides **transportation and logistics services** for the energy and mining sectors. It handles shipments of **oil products, raw minerals, and industrial equipment** across multiple regions.

Transportation is done through a **multi-modal network** — rail and sea for long-distance routes, trucks for regional deliveries, and air freight for urgent or high-value cargo.

▫ **1. Reports goal:** The report provides a comprehensive view of financial and operational performance for the logistics division.

It enables management to monitor revenue growth, profitability, delivery efficiency, and service reliability over time.

The dashboard supports data-driven decision-making by consolidating key KPIs across finance, operations, and customer service.

▫ **2. Data Sources:** Synthetic transaction data was used (Revenue, Plan Revenue, Cost, OTIF, Lead Time, Segments, Regions, Categories).

### ▫ **3. Key metrics**

- **Revenue & Gross Margin (%)** – measure overall business performance and profitability.
- **OTIF % (On-Time In-Full)** – tracks delivery reliability and service quality.
- **Lead Time (days)** – measures average shipment duration and operational efficiency.
- **Revenue Achievement % & Variance to Plan** – evaluate performance against business targets.
- **On-Time Improvement %** – shows year-over-year progress in delivery performance.
- **Volume & Total Shipments** – assess operational throughput and logistics capacity.

### ▫ **4. Key insights**

- In 2024, GM% consistently exceeded 50%, despite a slight decline in revenue.
- Average Lead Time increased by 0.2 days, which decreased OTIF% by 0.2 percentage points.
- The Chemicals category and the West region account for the largest contribution to delays.

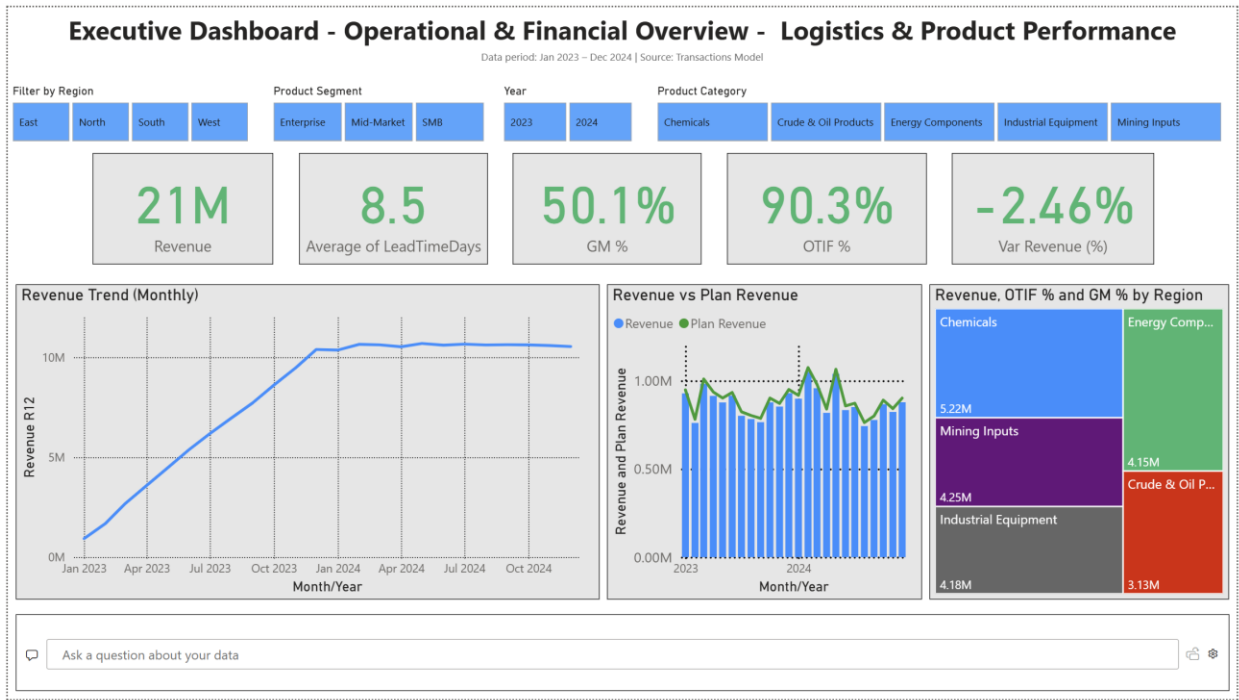

5. Tools and Methods

Power BI (DAX formulas, cross-page filtering, decomposition tree, key influencers).

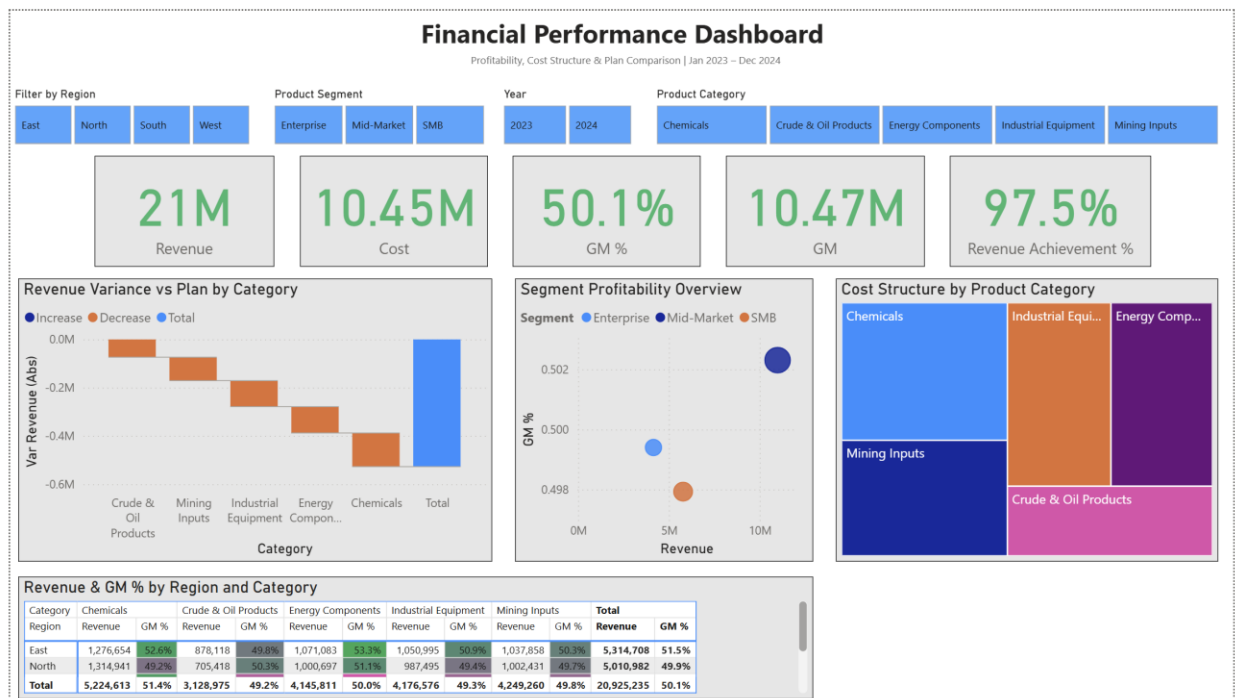

Visualizations: KPI cards, Combo Charts, Treemap, Waterfall, Scatter, Decomposition Tree.

6. Screenshots and page descriptions

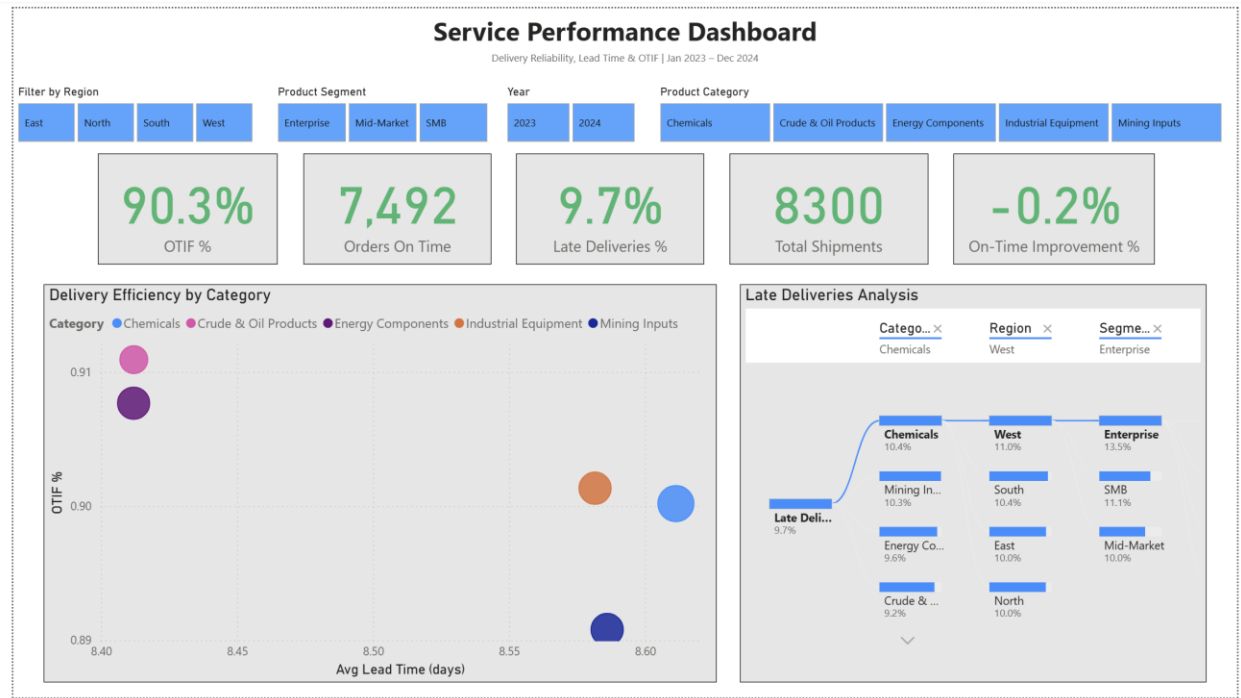

Overview: A general overview of key KPIs for the period.

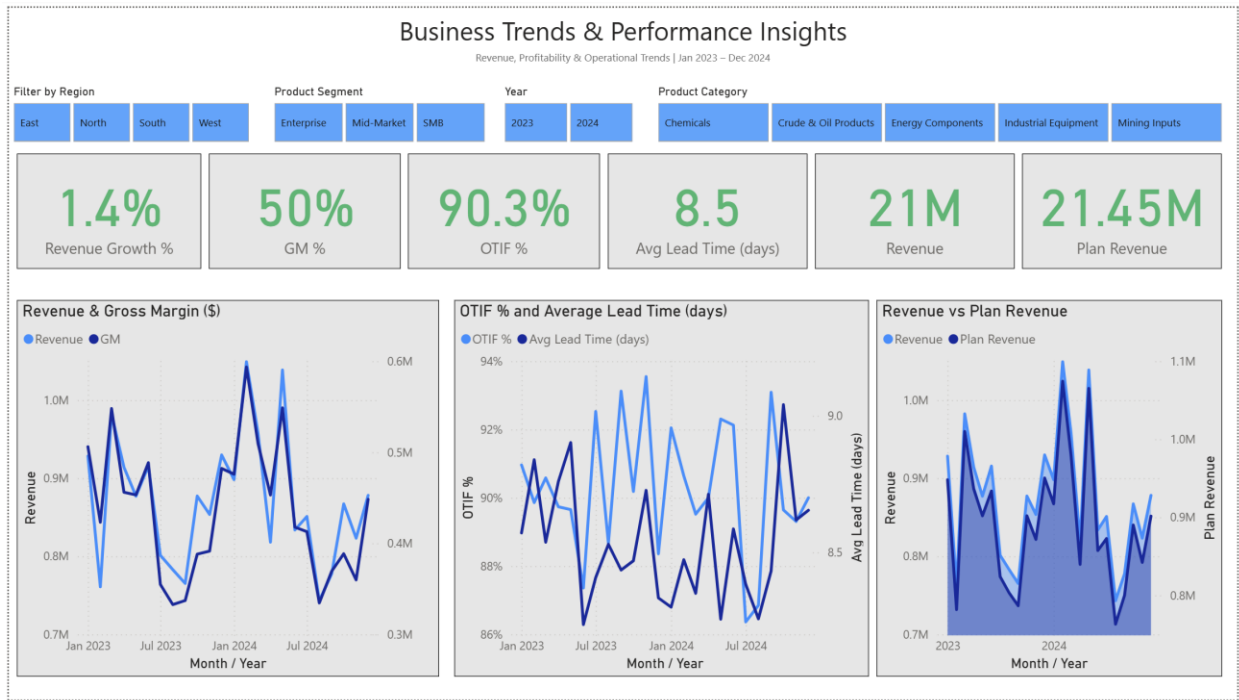

Financials: Analysis of revenue, expenses, and margins.

Service: Delivery and reliability indicators.

Trends: Monthly performance and comparison with plan.

7. Conclusion

The report provides a complete picture of financial and operational performance and can be used by management to make decisions on supply planning and optimization.
